- 1) Contact life may be extended beyond those values shown with the use of arc suppression techniques described in the DL205 User Manual. Since these modules have no leakage current, they do not have built-in snubber. For example, if you place a diode across a 24 VDC inductive load, you can significantly increase the life of the relay.
- 2) At 120 VDC 0.5A resistive load, contact life cycle is 200k cycles.
- 3) Normally closed contacts have 1/2 the current handling capability of the normally open contacts.
